

TOGETHER KIT S. MAYS, M.D. AND MOACIR SCHNAPP, M.D. have created what is now the oldest and most well-regarded pain management facility in the Mid-South. Dr. Mays' and Dr. Schnapp's clinical and pharmacologic research and pioneering work in nerve blocks spans over three decades. Effective treatment requires comprehensive evaluation by experienced physicians. The patients seen by Dr. Mays and Dr. Schnapp have access to diagnostic expertise gained from years of interventional pain management. For the best clinical outcome and functional improvement, diagnosis and treatment may include nerve blocks, medication management, and physical therapy. The physicians confer to make decisions on patient care. They are a perfect balance as personality opposites, but in pain management, they have one focus: relieving the suffering patient and meeting the challenges of the patient in pain. Their interest also extends to the design, development and production of rehabilitation instruments for the treatment of complex regional pain syndrome. They broke new ground together, and now continue in their indefatigable quest for answers and advances in the treatment and management of patients with pain. Each patient is treated individually with compassion, and always see a physician on each visit.

Mays and Schnapp Pain Clinic and Rehabilitation Center is the only CARF-certified outpatient pain clinic in the state as well as the region and is a Tennessee certified pain management clinic. The physicians' private practice, physical therapy, and ambulatory surgery center are all in one convenient location.

When the problem is pain, we're here to help: world class care in the heart of the Mid-South.
